PSPDFKit

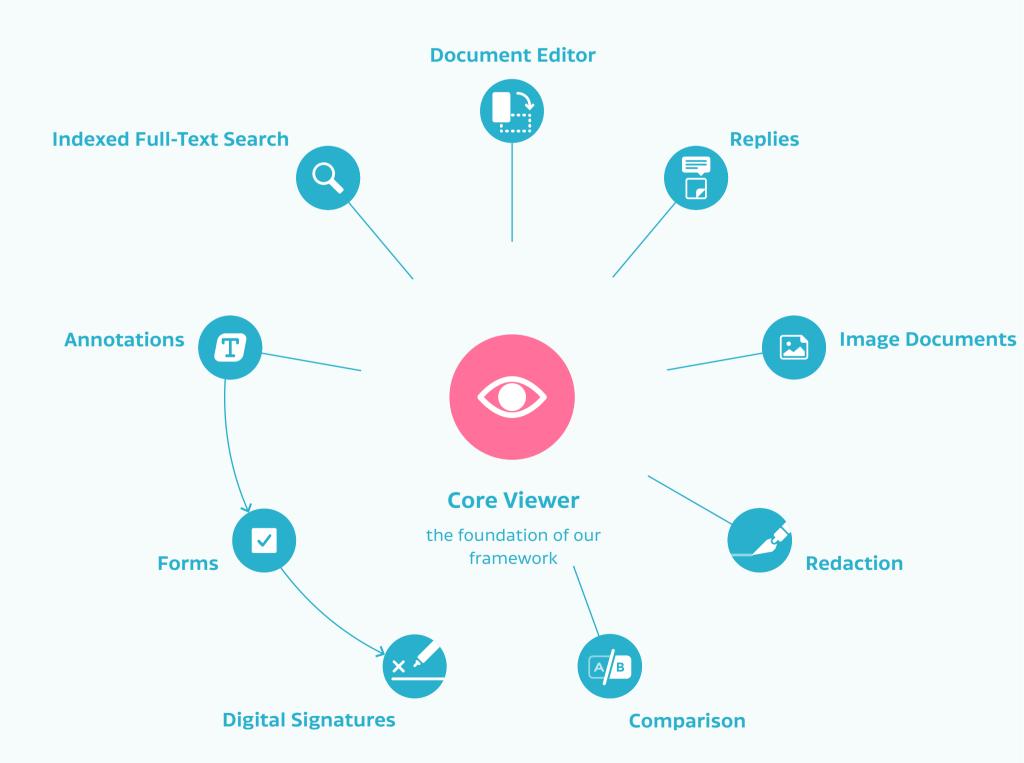

8 for iOS

8

Introduction

PSPDFKit's components are built on top of one another. It starts with the Core Viewer as the foundation of our framework, to which you can add on Annotations. The Forms component is then built on top of Annotations as a specialized annotation type. Finally, the Digital Signatures component is built on and works in coordination with Forms.

Indexed Full-Text Search, the Document Editor, Replies, Image Documents, Redaction, and Comparison are independent components and are licensed separately.

PART ONE

Getting Started

Getting Started: Integration

PSPDFKit 8 for iOS is designed for Xcode 10+ (SDK 12+) and fully supports iOS 10, iOS 11, and iOS 12.

CocoaPods

The simplest way to use PSPDFKit is by using Cocoapods. We provide a private URL for the podspec so you can integrate 'PSPDFKit' with minimal effort, either by always getting the latest stable release or by pinning to a specific version. For the stable release, use the following:

```
pod 'PSPDFKit'
podspec: 'https://customers.pspdfkit.com/cocoapods/.../latest.podspec'
```

Or, alternatively, pin to a specific version (e.g. 8.0.0):

```
pod 'PSPDFKit'
podspec: 'https://customers.pspdfkit.com/cocoapods/.../8.0.0.podspec'
```

Where Do I Find the Podspec URL?

If you are an existing customer, you can find your custom URL in our Customer Portal by choosing the Use CocoaPods tab when downloading PSPDFKit. If you are a new customer, please <u>contact our sales team</u> with your use case and the features you would like to license.

Carthage

PSPDFKit is also available via Carthage. You can find your private URL in the Use Carthage tab when downloading PSPDFKit in the Customer Portal. To always use the latest available version, add this to your Cartfile:

```
binary "https://customers.pspdfkit.com/carthage/.../PSPDFKit.json" >= 8.0
```

Manual Integration

For information on how to manually integrate PSPDFKit, see our <u>Integrating</u> <u>PSPDFKit</u> guide article.

Getting Started: Swift 4

Here is a simple example for using PSPDFKit, first in Swift 4:

```
import PSPDFKit
import PSPDFKitUI
// Create the PSPDFDocument.
// This is the container for your PDF file. It can also manage
multiple files.
let fileURL = Bundle.main.bundleURL.appendingPathComponent("Document.")
pdf")
let document = PSPDFDocument(url: fileURL)
// The configuration object is optional and allows further
customization.
let configuration = PSPDFConfiguration { builder in
    builder.thumbnailBarMode = .scrollable
}
// Create the PDF view controller.
let pdfController = PSPDFViewController(document: document,
configuration: configuration)
// Present the PDF view controller within a UINavigationController
to enable the toolbar.
present(UINavigationController(rootViewController: pdfController),
animated: true, completion: nil)
```

This and many more examples can be found in the **Examples** folder in the PSPDFKit download package.

Getting Started: Objective-C

Let's use the same example as before, but this time with Objective-C:

```
@import PSPDFKit;
@import PSPDFKitUI;
// Create the PSPDFDocument.
// This is the container for your PDF file. It can also manage
multiple files.
NSURL *fileURL = [NSBundle.mainBundle.resourceURL
URLByAppendingPathComponent:@"Document.pdf"];
PSPDFDocument *document = [[PSPDFDocument alloc]
initWithURL:fileURL];
// Create the PDF view controller.
// The configuration object is optional and allows further
customization.
PSPDFViewController *pdfController = [[PSPDFViewController
alloc] initWithDocument:document configuration:[PSPDFConfiguration
configurationWithBuilder:^(PSPDFConfigurationBuilder *builder) {
    builder.thumbnailBarMode = PSPDFThumbnailBarModeScrollable;
}]];
// Present the PDF view controller within a UINavigationController
to enable the toolbar.
UINavigationController *navController = [[UINavigationController
alloc initWithRootViewController:pdfController];
[self presentViewController:navController animated:YES
completion:NULL];
```
